

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-3 (Canceled).

Claim 4 (Previously Presented): A catalyst comprising a particle comprising silica and a composite oxide comprising molybdenum,

wherein the catalyst comprises a bulk composition and a surface composition,

wherein the Mo/Si atomic ratio in the bulk composition of the catalyst, expressed as

A, and the Mo/Si atomic ratio in the surface composition of the catalyst, expressed as

B, have a relationship such that B/A is not greater than 0.6,

wherein the bulk composition of the catalyst is expressed by the formula 1:

wherein, Sb, Mo, and O are antimony, molybdenum, and oxygen, respectively;

wherein C is at least one element selected from the group consisting of iron, cobalt,

nickel, manganese, uranium, cerium, tin and copper;

wherein D is at least one element selected from the group consisting of vanadium and tungsten;

wherein E is at least one element selected from the group consisting of magnesium,

calcium strontium, barium, lanthanum, titanium, zirconium, niobium, tantalum,

chromium, rhenium, ruthenium, osmium, rhodium, iridium, palladium, platinum,

silver, zinc, cadmium, boron, aluminum, gallium indium, sodium, potassium,

rubidium, cesium, thallium, germanium, lead, phosphorus, arsenic, bismuth, selenium,

and tellurium;

wherein SiO_2 is silica;

wherein the subscripts a, b c, d, e, f and g each represent an atomic ratio of each element;

wherein a is 10, b ranges from 0.1 to 15, c ranges from 1 to 20, d ranges from 0 to 10, e ranges from 0 to 20, g ranges from 10 to 200 and f is the atomic ratio of oxygen that fulfills the requirement of the valence of each element above.

Claim 5 (Canceled).

Claim 6 (New): The catalyst of claim 4, wherein the catalyst is synthesized by a process comprising a step of drying the catalyst in a drying chamber of a spray dryer, wherein hot air flows through the drying chamber, wherein the difference in the temperature of the hot air at an inlet of the drying chamber and the temperature of the hot air at an outlet of the drying chamber ranges from 20°C to 60°C.
